

It's time we stop talking about technology and start focusing on how technology can improve teaching and learning in our classrooms. In this book, Holly Clark and Tanya Avrith, explore the ways in which technology can be purposefully used to amplify and disrupt the learning experience. This beautifully designed book walks teachers through the process of rethinking the delivery model of instruction and is focused around the ideas of using technology to make student thinking visible, give every student a voice and allowing them to share their work. The Google Infused Classroom is packed full of examples of how you can use just ten simple online tools, to completely transform your classroom. In addition, it includes a special section on student digital portfolios.

Our Claremont group thoroughly enjoyed this book and we highly recommend it as a book club idea to others. It is an easy quick read with endless ideas for enriching learning for students and using innovation and technology to enhance learning. The tips and tools shared are very helpful across all grade levels and subject areas. The authors have presented the ideas and tools in a very user-friendly way to appeal to all levels of learners. We are going to create a google community site to share ideas with colleagues. We will upload a link to the hub. The tools shared in this book are a great fit as we embark on new curriculum.

You won't want to miss this as a book club read!!
